

THE SMALL COMPOSITE DOOR

small grand entrances

Your front door is special, it's what keeps you and your family safe, protecting you from the elements.

Every day, thousands of people across the UK look to change their front door, the impact of a new front door can transform any property but people with older properties struggle as the doors in older properties were not as tall as doors today and modern doors have not been designed with this in mind.

Tinidor has been created to help solve this issue. Tinidor gives you and your family the protection you require with a touch of class.

***so what's our secret?
security is standard...
...not an option***

Tinidors secret is its locking system. Unique to *Tinidor*, our special multi-point lock has been designed with the locking points closer this is why we can make shorter doors, but that's not all.

The standard Tinidor lock has five locking points, compared to other composite doors that have three, this is a big boost to the security of your home. These points have been designed as bolts not hooks, the bolt locking system has increased working tolerances, giving it a smoother operation for longer. Combine that with the eleven pin high security Ultion cylinder, the ability to add hinge protection bolts and the solid hardwood core and you have real security.

Automatic locking is provided thanks to the innovative Winkhaus AV3 locking system. This three point hook lock automatically engages its main locking points when you close your door meaning you don't have to lift the handle. In addition it comes with innovative day time latch as standard meaning you can switch off the automatic part of the lock so if you need to pop out to the car or bins and the door slams shut behind you, you won't be locked out.

ULTION

security fitted as standard

At Tinidor, security is not an afterthought, as well as our unique locking system all our doors are fitted with Ultion. The moment that Ultion detects forced entry it activates an attack lock directly into the central cam, this is 'Lock Down Mode'. Even if the most determined intruder gets past Ultion's two sacrificial sections they won't get to the attack lock because it is protected deep inside a solid molybdenum core and secured with a dedicated retaining pin. When Ultion is in **Lock Down Mode** your home and family are safe.

£1000 GUARANTEE

IF AN INTRUDER BREAKS INTO YOUR HOME BY SNAPPING THE CYLINDER, ULTION WILL PAY YOU £1000

colour options

Adding colour makes a massive difference to how your home looks but also gives people a glimpse into your personality. Black doors can be elegant, powerful, prestigious and are a popular choice for homeowners up and down the country, while white doors give a clean and crisp look to your home. Anthracite or French Grey doors can add a timeless and classic air to your home while blue doors show you to be authoritative and trustworthy. Green doors can suggest a calm, quiet, and soothing household while red doors can show a commanding, dynamic, engaging personality lives there. Our new Lavender door would suggest the homeowners are spirited and young at heart while our natural wood colours like Walnut or Oak can show a rustic and comforting home.

We often use colour to express ourselves and whatever colour you choose for your new door we know it will be perfect for your home. How do we know this? Because you chose it.

Satin Glass

A white composite door with a timber look joint, set in a brick wall next to a window. The door features a small diamond-shaped window and a black handle. The window to the right has multiple panes and shows greenery outside. The brick wall is red and has a black metal bracket on the left.

timber look joints

While other composite door manufacturers just offer the standard 45° welded mitre joints on the framework, here at Tinidor we give you the option of timber look joints as well.

When you want your new door to look the part, welded joints give the game away especially if you've gone to the trouble of having a woodgrain texture outerframe.

Our timber look joints have been developed carefully to give a true timber joint appearance while keeping the joint strong and rigid. Our special triple fixing method keeps the joint from moving and creating unsightly gaps.

traditional hardware

From a listed property to a country cottage our traditional hardware collection features a range of hand-made door furniture including handles, door knockers and letter plates as well as some decorative items such as studs and hinge fronts all supplied in a black or pewter finish.

framework

We have two classic profile styles for you to choose from, chamfered (System 10) and sculptured (Rustique) profiles. Both offer superb security features, high energy efficiency and an attractive hand crafted finish.

Both profiles are available in a range of coloured and woodgrain finishes that have been specially selected to suit any home.

Rustique **System10**

thresholds

At Tinidor aluminium thresholds are standard, they are more hard wearing and smaller than the PVCu thresholds that are standard on so many composite doors available on the market. PVCu thresholds are still available though if needed.

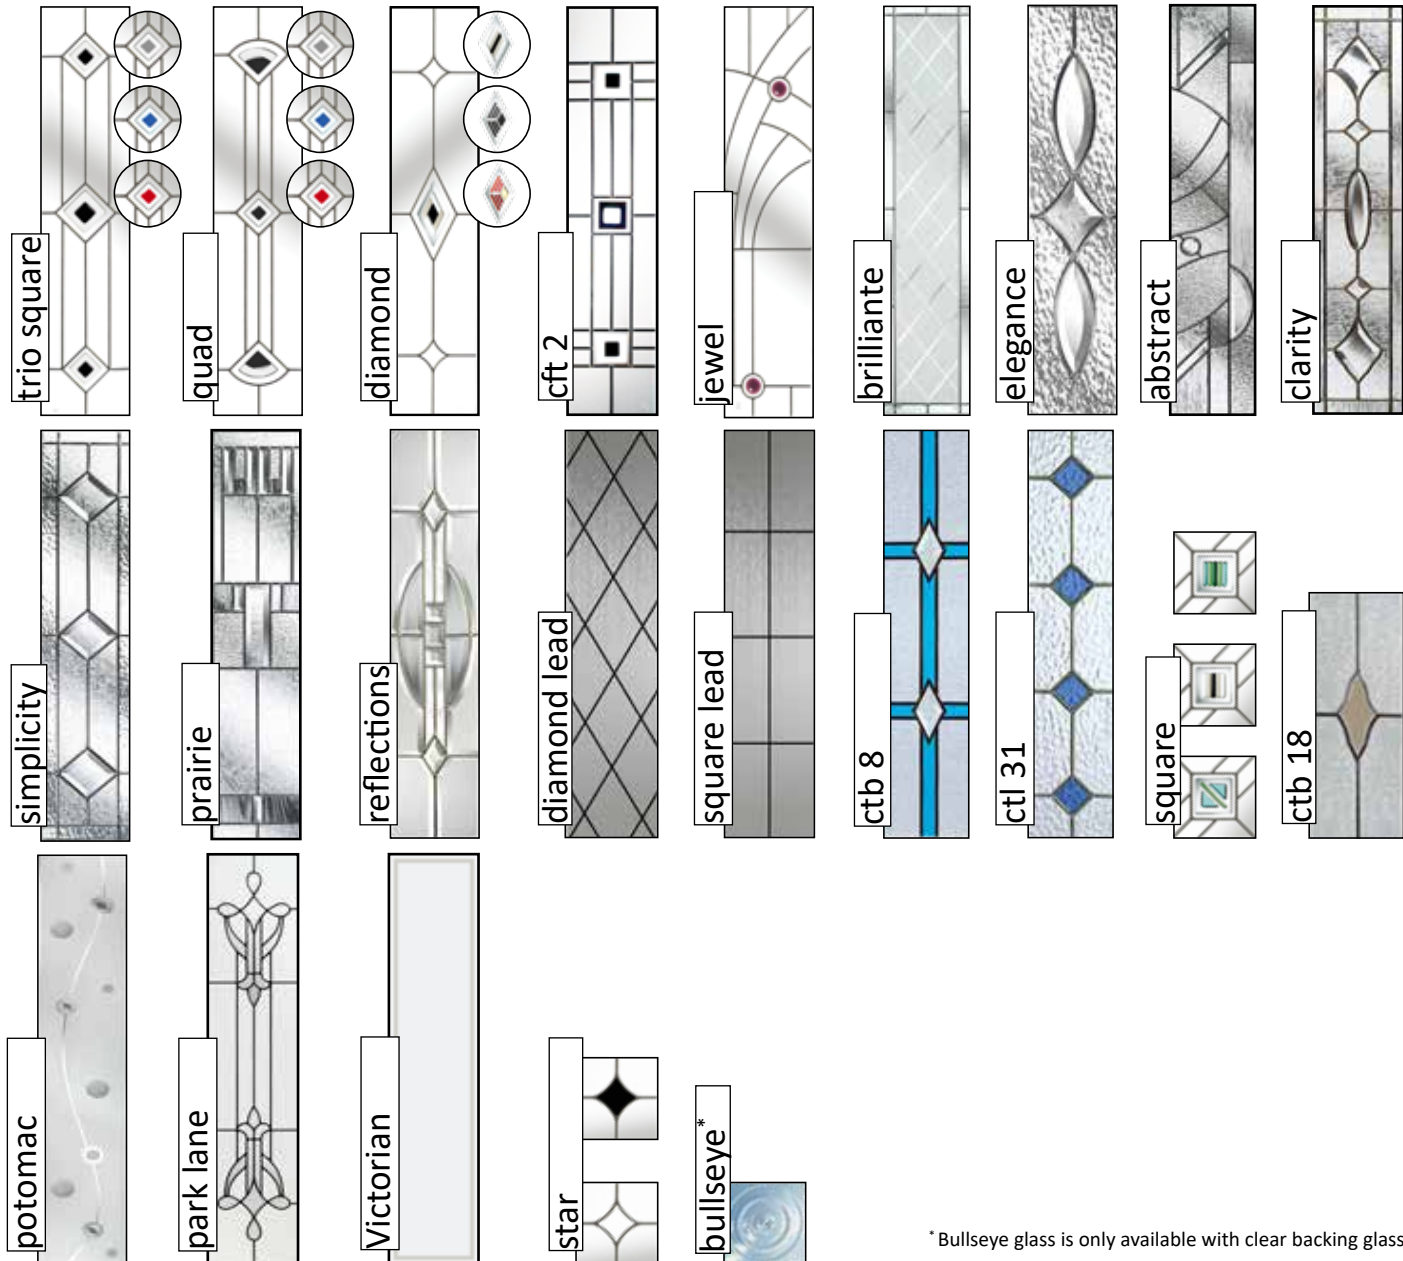

Standard Threshold

AM3-70 Threshold

Available with or without a ramp for Part M

glass options

* Bullseye glass is only available with clear backing glass.

energy efficiency

As you would expect from a modern composite door, Tinidor is energy efficient.

The carefully chosen combination of framework, reinforcement and energy efficient sealed glass units combined with the hardwood core of our door leaf, helps us achieve a 1.4W/m²K U-Value meaning it will help keep you and your family warm as well as safe.

Every Tinidor carries a CE Mark giving you peace of mind when buying your new door.

the technical bit

At Tinidor we're known for our little doors but that doesn't mean we can't make normal size doors too. So we thought we would throw some numbers at you so you know what we can and can't make.

The minimum height we can make a door is 1740mm using the AM3-70 aluminium threshold and no sill (if you want a sill just add 30mm to the height). The maximum door height (not including a top light) is;

Threshold Option	Frame Height
AM3-70	2136mm
Standard Aluminium	2139mm
Low PVCu	2158mm
Standard PVCu	2171mm

The minimum door width depends on the style of door chosen. You have probably noticed some little coloured triangles in the top left hand corner of the door images, these coloured markers link to the table below to help you find out how small it can be made.

	Minimum Width
 Green	600mm
 Yellow	854mm (800mm special order)
 Blue	854mm

The maximum width our doors can be made is 1024mm without a side panel.
